ABDULRAHMAN HOSSAM

.NET Backend Developer

6th of October, Egypt | abdulrahmn398@outlook.com | (+20)-1004591659 | LinkedIn | GitHub

SUMMARY

Detail-oriented .NET Backend Developer with a solid foundation in software engineering principles and hands-on experience building scalable web applications. Proficient in ASP.NET Core (6-9), Entity Framework, and SQL Server, with a deep understanding of Clean Architecture, SOLID principles, and Design Patterns (CQRS, Repository). Passionate about writing clean, maintainable code and optimizing performance using tools like Redis and SignalR. Currently pursuing a degree in Education, with a proven track record of delivering complex projects like E-commerce and Healthcare management systems.

PROJECTS

Chat Application Social Network, ASP.NET Core 8 & SignalR *Link*

- Built a real-time messaging system using SignalR Hubs, supporting group chats, presence tracking, and instant delivery with SQL Server and EF Core.
- Implemented Repository Pattern and JWT Authentication, integrating Cloudinary API for secure media uploads and AutoMapper for efficient data DTO mapping.

Kernel Simulator, ASP.NET Core 9 *Link*

- Developed a tick-based OS kernel simulator implementing complex Process Scheduling algorithms like Round Robin, Preemptive Priority, and Aging to prevent starvation.
- Architected a simulation engine managing Process States (Ready, Running, Blocked) and I/O Blocking using a decoupled service-oriented architecture.

E-Commerce MVC, ASP.NET Core 8 *Link*

- Developed a full-stack MVC application featuring Identity-based Authentication, dynamic product management, and a robust Shopping Cart system.
- Engineered secure Order Processing workflows and integrated a payment gateway, ensuring a responsive user experience with C# and SQL Server

Prime Care, ASP.NET Core 8 *Link*

- healthcare platform using Clean Architecture (Domain, Application, Infrastructure layers) to ensure separation of concerns and maintainability.
- Developed a secure Admin Dashboard with Role-Based Access Control (RBAC), integrating Redis for caching and JWT for identity management.

Talabat Management System, ASP.NET Core 8 *Link*

- Developed a robust backend for a food delivery system using Repository and Specification Patterns, featuring an advanced filtering/pagination engine and Redis for efficient data caching.
- Integrated Stripe API for secure payments and utilized ASP.NET Identity for account management, ensuring high performance and scalable database interactions with EF Core.

TOOLS AND FRAMEWORKS

Backend: C#, .NET Core (6,7,8,9) ,Entity Framework Core, LINQ, IIS, SignalR, RESTful APIs, MVC.

Database: SQL Server, Redis.

Cloud Services: Cloudinary (File Storage).

Authentication: .NET Core Identity, JWT.

Integration: AutoMapper.

Architectural & Design Patterns: Clean Architecture, Repository Pattern, Specification Pattern, CQRS Mediator Pattern, Iterator Pattern, Observer Pattern, Strategy Pattern, Solid Principles.

State Management: Agile Methodologies

EDUCATION

College Of Education *(Al-Azher University)* **Oct 2020 – Present**

COURSES AND CERTIFICATION

Build an app with ASPNET Core and Angular from Scratch **Jun 2024 – Jul 2024**

Udemy

ASP.NET Core 8 **Oct 2024 – May 2025**

Route IT-Training Center
